Now Investigators have an easier way to collect fingerprints from known individuals in the field for elimination and court reporting purposes! No more ink!

FingerSCAN ePrintsID is a mobile application that runs on smartphones and tablets. Because of the portability of this system, it's possible to collect electronic fingerprint images in the field and share those images and the elimination fingerprint record that the app generates via email or secure FTP file transfer.

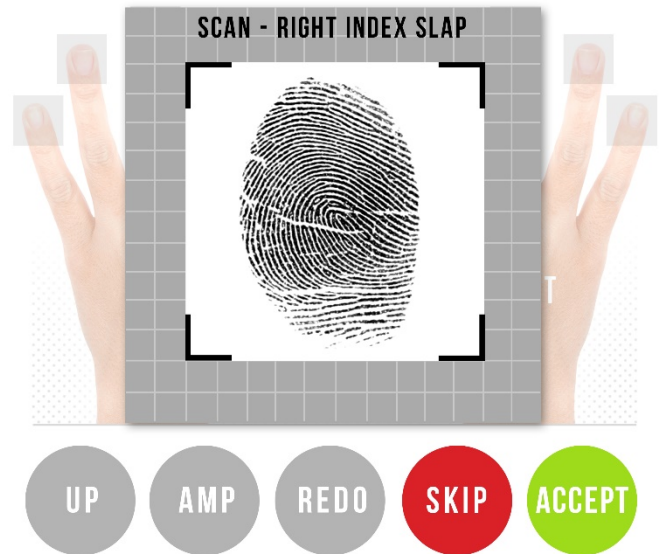

- **Faster Processing Time.** FingerSCAN ePrintsID offers an efficient workflow for capturing up to ten fingerprint (slap and roll) images that can be sent via email in real-time to a remote identification unit for comparison against latent prints found at a crime scene. Furthermore, the app creates an elimination fingerprint card for comparison and court reporting purposes.
- **Better Images.** Ink is messy and unless you are a fingerprinting expert, it can be difficult to capture good quality images using ink. Not so with electronic fingerprinting. FingerSCAN ePrintsID works with the Watson Mini compact fingerprint scanner to produce high quality images even from some of the most difficult people to fingerprint. (This scanner is also used by coroners, medical examiners and death investigators to fingerprint decedents.)
- **No Mess.** FingerSCAN ePrintsID requires no ink and card because the fingerprints are captured electronically. Rescans are super easy and quick with no retab mess.
- **Portability.** Since the scanner is so small (fits in a jacket pocket or vest) and the app can run on your department issued smartphone, it is possible to capture prints in the field while known individuals are at the crime scene. This saves trips to the department and helps expedite the fingerprint comparison and identification process.
- **Rapid ROI.** Having a more efficient process, enabled by the FingerSCAN ePrintsID system can save the department money that can be applied elsewhere.

System Features

- **Standards Compliant.** Meets FBI standards for fingerprint image quality. Mobile ID IQS FAP 45 PIV Appendix F rated.
- **Easy to Navigate.** The app is so easy to use that anyone can be up and running within 15 minutes.
- **Auto-Progression.** Automatically progress to next finger in sequence for faster scanning process.
- **Auto-Generate Fingerprint Card.** No more copy and pasting fingerprint images onto a card. This app automatically generates a Elimination fingerprint card.
- **Edit Records.** Don't have time to complete all data fields and fingerprint scans. No problem. Enter minimal data and images when you can and add more details and images later.
- **Small Form Factor.** The Watson Mini scanner measures 2.5" x 2.4" x .5" with 5 foot cable. The IdentiFi-45 scanner connects to the mobile device via secure WiFi connection (no cable) and measures 2 ¾ x 3 ¾ x 1 ½ in size. Both scanners are the perfect size to use in the field.
- **Multiple Data Fields.** Capture all the information you captured before on a standard hard card used for elimination purposes.
- **WiFi/SFTP Capable.** Standard method for sharing files is via email, but the app can be made to share info via Secure FTP submission if required. You can also download files via USB.
- **Multi-Platform Support.** FingerSCAN ePrintsID works with Android and iOS devices.
- **Smart Recovery.** The app saves data and images throughout the record creation process and allows you to pick up where you left off in the event of device power down or app crash.
- **Download Free Trial.** You may try the app free for 3 days. In order to scan fingers you need the Integrated Biometrics Watson Mini scanner (Android) or IdentiFi-45 scanner (iOS) and an annual cross-platform transaction server user account for your agency.
