

## Now Coroners, Medical Examiners and Death Investigators have an easier way to collect fingerprints from decedents at the scene or in the morgue. No more ink!

FingerSCAN DecedentID is a mobile application that runs on Android, iOS and Windows devices. Because of the portability of this system, it's possible to collect electronic fingerprint images in the field and share those images and the fingerprint record that the app generates via email or secure FTP file transfer.

- **Faster Processing Time.** FingerSCAN DecedentID offers an efficient workflow for capturing fingerprint (slap and roll) images that can be sent via email in real-time to a remote identification unit for identification purposes. Furthermore, the app creates a decedent fingerprint card for archive and reporting purposes.
- **Better Images.** Ink is messy and unless you are a fingerprinting expert, it can be difficult to capture good quality images using ink. Not so with electronic fingerprinting. FingerSCAN DecedentID works with the Watson Mini and IdentiFi-45 (WiFi) compact fingerprint scanners to produce high quality images. (Does not work for degloved and mummified decedents.)
- **No Mess.** FingerSCAN DecedentID requires no ink and card because the fingerprints are captured electronically. Rescans are super easy and quick with no retab mess.
- **Portability.** Since it is possible to scan and rescan fingers relatively quickly using the electronic method and no hard cards are needed, there is no cost associated with cards. Also, if you already own your own Android, iOS or Windows device, chances are you can use your own device. We support the Bring Your Own Device (BYOD) initiative. Ready to Go Jumpkits that are at least six times less than the cost of a traditional livescan systems are available with everything you need to get you up and running quickly.
- **Rapid ROI.** Many coroners have reported that having a more efficient process, enabled by the FingerSCAN DecedentID system, has saved them money that can be applied elsewhere.

# System Features

- **Standards Compliant.** Meets FBI standards for fingerprint image quality. Mobile ID IQS FAP 45 PIV Appendix F rated.
- **Easy to Navigate.** The app is so easy to use that anyone can be up and running within 15 minutes.
- **Auto-Progression.** Automatically progress to next finger in sequence for faster scanning process.
- **Auto-Generate Fingerprint Card.** No more copy and pasting fingerprint images onto a card. This app automatically generates a Decedent fingerprint card.
- **Edit Records.** Don't have time to complete all data fields and fingerprint scans. No problem. Enter minimal data and images when you can and add more details and images later.
- **Small Form Factor.** The Watson Mini scanner measures 2.5" x 2.4" x .5" with 5 foot cable. The IdentiFi-45 WiFi scanner connects to the mobile device via secure WiFi connection (no cable) and measures just 2 3/4 x 3 3/4 x 1 1/2 in size. Both scanners are the perfect size to use with rigid fingers from subjects located on an exam room table or on the ground in remote field locations.
- **Multiple Data Fields.** Capture all the information you captured before on a standard hard card used for identification purposes.
- **WiFi/SFTP Capable.** Standard method for sharing files is via email, but the app can be made to share info via Secure FTP submission if required.
- **Multi-Platform Support.** FingerSCAN DecedentID runs on Android, iOS and Windows platforms.
- **Smart Recovery.** The app saves data and images throughout the record creation process and allows you to pick up where you left off in the event of device power down or app crash.
- **Download Free Trial.** You may try the app free for 3 days. In order to scan fingers you need the Integrated Biometrics Watson Mini (Android and Windows) or IdentiFi-45 WiFi scanner (iOS) and an annual cross-platform transaction server user account for your agency.
